

Alzheimer's Association Business Consortium
Translational Animal Models for Alzheimer's Disease Think Tank
November 28-29, 2018
Park Hyatt Hotel
Washington, D.C.

MEEETING OVERVIEW

Alzheimer's disease (AD) animal models have provided important insights into the disease; however, translation to the clinic has been limited. The field needs more predictive animal models in order to better understand disease mechanisms and to accelerate the discovery of new AD therapeutics.

The purpose of this Animal Models for AD Think Tank is to understand the history of AD animal models, explore the current state of the science, to identify the gaps and to recommend specific actions in order to develop the next generation of AD animal models.
