

Here's what you need to know about Alzheimer's.

Alzheimer's is not normal aging; it's a progressive, fatal disease. **There is no cure.** And today it is the seventh-leading cause of death in the United States.

There are currently more than 5 million Americans living with Alzheimer's—including more than 120,000 Floridians in the 31-county area that the Central & North Florida chapter covers. By 2050, the number of individuals with Alzheimer's could reach 16 million unless science finds a way to prevent or effectively treat the disease.

With no effective prevention or treatment methods, Alzheimer's disease has the power to bankrupt families, communities and our health care system.
