**ALZHEIMER'S ASSOCIATION APPLAUDS
SOCIAL SECURITY ADMINISTRATION FOR ADDING EARLY-ONSET
ALZHEIMER'S TO ITS COMPASSIONATE ALLOWANCES INITIATIVE
-Alzheimer's Association Statement-**

(Cedar Rapids, IA February 11, 2010) – In its effort to improve and expedite the disability determination process, the Social Security Administration (SSA) has announced that it will add early-onset Alzheimer's disease to its Compassionate Allowances Initiative. The initiative identifies debilitating diseases and medical conditions that meet the SSA's disability standards for Social Security Disability Income (SSDI) or Supplemental Security Income (SSI). Inclusion in the initiative allows for faster payment of Social Security benefits to individuals with Alzheimer's disease. The Alzheimer's Association applauds Social Security Commissioner Michael Astrue and the SSA for understanding that the cognitive impairment caused by Alzheimer's disease leaves individuals unable to maintain gainful employment and deserving of an expedited disability determination.

“As the leading research, advocacy, and support organization for Alzheimer's disease, the Alzheimer's Association has actively sought the inclusion of early-onset Alzheimer's in the Social Security Administration's Compassionate Allowances Initiative,” says Kelly Hauer, Executive Director for the Alzheimer's Association East Central Iowa Chapter. “Now, individuals who are dealing with the enormous challenges of Alzheimer's won't also have to endure the financial and emotional toll of a long disability decision process.”

Since 2003, the Alzheimer's Association has been advocating on behalf of individuals with early-onset Alzheimer's as they navigate the Social Security disability determinations process and welcomes the SSA's decision. In July of last year, SSA hosted a hearing in Chicago to examine access to Social Security disability benefits for people with early-onset Alzheimer's disease through its Compassionate Allowances Initiative. More than 70 advocates with Alzheimer's disease, their families and caregivers attended the hearing to support testimony from people living with Alzheimer's and medical experts. Eastern Iowans Dave and Kathy Good, Steve and Rose Callison, Gary and Alice Blasen, Carol Turner and Susan Primrose, Jon Witherell, and National Alzheimer's Association Board member Debbie Jones all made the trip. “We were

informed that in a letter addressed to our President and CEO Harry Johns, SSA Commissioner Michael Astrue indicated that Alzheimer's Association advocates were pivotal in making the decision. This action demonstrates the power of grassroots advocacy and the importance of using our voices", added Hauer.

Until now, individuals with early-onset Alzheimer's disease have faced a myriad of challenges when applying for SSDI or SSI, including a long decision process, initial denials, and multiple appeals. Today's decision will simplify and streamline the SSDI/SSI application process and decrease the wait time for benefits, which for some has lasted as long as three years.

There are currently an estimated 5.3 million Americans with Alzheimer's disease. Although the majority of Alzheimer cases are individuals age 65 and older, a significant number of people under age 65 are also affected by this fatal disease and have few financial options other than the Social Security disability program.

In addition to Alzheimer's disease, mixed-dementia and Primary Progressive Aphasia were also added to the Compassionate Allowances Initiative under the SSA's recent decision. To determine which diseases and conditions to include, SSA has held several public outreach hearings throughout the country that have included testimony from medical and scientific experts, as well as those directly affected by these diseases and conditions. The July 2009 Compassionate Allowance Hearing on Early-Onset Alzheimer's Disease and Related Dementias, held in Chicago, included testimony from Johns, several of the nation's top Alzheimer researchers, and caregivers and individuals with early-onset Alzheimer's who discussed the challenges they faced during the disability application process. During the day-long hearing, SSA officials heard about the terminal nature of Alzheimer's, the disabilities that often prohibit work in even the earliest stages of the disease, and the lack of effective treatments to modify or halt the progression of Alzheimer's.

In addition to participation in the hearing, as many as 600 people with Alzheimer's and other dementias and their caregivers responded to the Association's request to submit written comments to SSA about their experiences applying for disability benefits. A sample of these comments are posted on SSA's Compassionate Allowances website: <http://www.socialsecurity.gov/compassionateallowances/statements.htm>

The Social Security Administration's proactive efforts to "fast track" certain conditions will help to reduce the backlog of disability claims and, more importantly, ensure those claims that fall under this initiative will be decided within days instead of months or years.

"The diagnosis of Alzheimer's indicates significant enough cognitive impairment to interfere with daily living activities, including the ability to work. This decision will help a significant number of Alzheimer families. It will also help the Social Security Administration, since long delays and appeals in the disability determination process are costly for the agency," says Hauer. "The Alzheimer's Association praises SSA for this

decision and remains committed to continue to work with Commissioner Astrue and his colleagues at the Social Security Administration in support of its implementation nationwide.”

Alzheimer’s Association

The Alzheimer's Association is the leading voluntary health organization in Alzheimer care, support and research. Our mission is to eliminate Alzheimer’s disease through the advancement of research; to provide and enhance care and support for all affected; and to reduce the risk of dementia through the promotion of brain health. Our vision is a world without Alzheimer’s. For more information, visit www.alz.org.
