In Arizona, 13.4 percent – one in eight – of those aged 45 and over report they are experiencing confusion or memory loss that is happening more often or is getting worse (“subjective cognitive decline”).

Nearly 60 percent of them have not talked to a health care professional about it.

For those with worsening memory problems, 49.2 percent say it has created “functional difficulties” – that is, caused them to give up day-to-day activities and/or interfered with work or social activities.
