Why participate in research?
In the United States alone, more than 5 million people are living with Alzheimer’s and over 15 million are serving as their unpaid caregivers. Every 66 seconds, someone is diagnosed with this devastating disease, which kills more Americans than diabetes and more than breast cancer and prostate cancer combined.

By participating in clinical research, you can help to accelerate progress and provide valuable insight into potential treatments and methods of prevention. Without the participation of people like you, finding a cure is nearly impossible.

Don’t just hope for a cure. Help us find one.
Everyone can help advance Alzheimer’s disease research.

alzheimer’s association®
The Alzheimer’s Association is the leading voluntary health organization in Alzheimer’s care, support and research. Our mission is to eliminate Alzheimer’s disease through the advancement of research; to provide and enhance care and support for all affected; and to reduce the risk of dementia through the promotion of brain health.

Our vision is a world without Alzheimer’s®.

What is TrialMatch?
Alzheimer’s Association TrialMatch® is a free, easy-to-use clinical studies matching service that generates customized lists of studies based on user-provided information. You can easily see what studies you may qualify for.

Our continuously updated database contains more than 250 studies, including both pharmacological (drug) and non-pharmacological (non-drug) studies being conducted at sites across the country and online.

Who can sign up for TrialMatch?
Everyone. Individuals with dementia or those who are at risk of developing it, caregivers and healthy volunteers with no dementia issues can all benefit from this matching service to learn more about studies that may be available to them or someone they know.

What types of studies does TrialMatch include?
The TrialMatch database includes a wide range of studies. While some involve drugs and physical tests, others involve observation and questionnaires, and some take place entirely online.

The TrialMatch database includes:
» Treatment trials that test new treatments or combinations of treatments.
» Diagnostic studies that find new tests or procedures for diagnosis.
» Prevention trials that investigate ways to prevent the onset of the disease.
» Quality of life studies that explore ways to improve quality of life for individuals who are living with the disease, their caregivers and family members.
» Online studies that are web-based and conducted entirely online.

How does TrialMatch work?
Step 1:
Visit TrialMatch at alz.org/TrialMatch. For additional assistance email TrialMatch@alz.org or call 800.272.3900 (press 1 for clinical trials).

Step 2:
Create your account and answer a few confidential questions to complete a profile. When creating your account, you may elect to opt in or out of receiving email notifications from TrialMatch as new studies become available. You’ll also have the option to create multiple profiles within your account. For example, one for you, one for a parent and one for a partner or spouse.

Step 3:
Submit your answers. TrialMatch will immediately generate your customized list of potential study matches, which you can view on your match results page.

Step 4:
Review your match results and decide if you wish to contact any of the studies. You are under no obligation to contact or participate in any study. Remember, your profile information is kept confidential.

When I was first diagnosed I felt like a victim. Participating in a clinical study made me feel like I was taking my life back and doing something to fight this disease.
- Paul Hornback
Living with Alzheimer’s disease
