The Outlook on ALZHEIMER’S

Almost every day, the staff at the Alzheimer's Association is asked about the latest research advancements, and if a cure is coming. We are proud to be able to say that we are the largest private funder of Alzheimer's research and have been involved in every major advancement in Alzheimer's research since the 1980's awarding in excess of $265 million to more than 1,800 projects.

But there is more to be done. In July, the Alzheimer's Association International Conference on Alzheimer's Disease 2010 (AAICAD) was held in Honolulu, Hawaii. More than 3,800 of the best researchers from around the world gathered in an effort to speed research breakthroughs toward diagnosis, treatment, prevention and a cure. It is the privilege of the Alzheimer's Association to host this global event.

At AAICAD, we announced the launch of our new research microsite at www.alz.org/research. We look forward to this site becoming a hub for the research community and others who are seeking the latest in Alzheimer's research information. We also publically launched Alzheimer's Association TrialMatch™, a confidential and free interactive tool that provides comprehensive clinical trial information and an individualized trial matching service for people with Alzheimer's disease and related dementias.

In central Ohio, we are honored to have multiple recipients of Alzheimer's Association research grant awards and the Memory Disorders and Neurobehavioral Clinics at The Ohio State University. It is exciting to be involved in ground breaking efforts to assist those with Alzheimer's disease and related dementias and the persons who care for them.

In this issue of Alzheimer's Outlook you will find more information on our research efforts and the outcomes of AAICAD including the launch of TrialMatch™.

Thank you for continuing to move forward the vision of a world without Alzheimer's disease.

Sincerely,

Gregory J. Winslow
Interim Executive Director and CEO

Alzheimer’s Breakthrough Ride

From July 17-Sept. 21, researchers will cycle across the country, relay-style, to collect 50,000 signatures. Follow Alzheimer researchers as they ride cross-country to raise awareness for the Alzheimer’s Breakthrough Act and other legislation to make Alzheimer’s a national priority.

Show your support. Sign the petition, donate or attend a signing event in Cleveland on Monday, September 13th. Visit the web at www.alz.org/research/breakthroughride.
In His Own Words....Tim Bainbridge

Following my wife’s diagnosis of early-onset Alzheimer’s in the fall of 2003 it was suggested that we consider participating in a medical trial. As we mulled that idea over, I thought to myself, “an experimental medication, why not?” Deidre and I would tackle this diagnosis with the same spirit we’d confronted every other problem in our lives. We’d not have regrets, or reach the end of this and wish we’d tried to do more. We knew this dreaded disease was very progressive and degenerative. We not only wanted to slow the progression of the disease down and minimize the degenerative effects of it for her, but the lawyer in me wanted to fight, and the nurse in her wanted to help others, and the parent in each of us wanted to do anything we could to assist others who might someday suffer from this disease, our children included.

I’d sought the counsel of a trusted colleague, who is also a physician and someone with whom I’d attended high school and college. He helped convince me that the best course of treatment for Deidre was to go ahead and participate in an experimental study. While research medications may have some significant negatives, I felt that with some research of my

Why We Advocate...

Making Alzheimer’s disease a national priority is the work of everyone – persons with the disease, their caregivers, their elected officials, policymakers, leaders in health care, insurance and...their friends and neighbors. At the heart of this effort you find the most passionate, loyal, under-paid and under-recognized caregiver of their loved one diagnosed with Alzheimer’s or related dementia disease.

“Changing the Trajectory of Alzheimer’s Disease: A National Imperative” shows that in the absence of disease-modifying treatments, the cumulative costs of care for people with Alzheimer’s from 2010 to 2050 will exceed $20 trillion in today’s dollars. The report, also shows that the number of Americans age 65 and older who have this condition will increase from the 5.3 million today to 13.5 million by mid-century.

Total costs of care for individuals with Alzheimer’s disease by all payers will soar from $172 billion in 2010 to more than $1 trillion in 2050, with Medicare costs increasing more than 600 percent, from $88 billion today to $627 billion in 2050. During the same time period, Medicaid costs will soar 400 percent, from $34 billion to $178 billion. One factor driving the exploding costs by 2050 is that nearly half (48 percent) of the projected 13.5 million people with Alzheimer’s will be in the severe stage of the disease when more expensive, intensive around-the-clock care is often necessary.

The new report is not all bad news, however, as it shows that Medicare and Medicaid can achieve dramatic savings – and lives could be significantly improved – with even incremental treatment improvements.

“Changing the Trajectory of Alzheimer’s Disease: A National Imperative” is available on line at www.alz.org/alzheimers_disease_trajectory.
NEW RESEARCH ADVANCES
Alzheimer’s Association
2010 International Conference on Alzheimer’s Disease

This July, nearly 4,000 scientists from around the world gathered to report and discuss the latest advances in research on treatments, risk factors, and diagnosis for the health epidemic of the 21st century – Alzheimer’s disease – at the Alzheimer’s Association 2010 International Conference on Alzheimer’s Disease (AAICAD 2010) in Honolulu.

“With an aging baby boomer generation, the Alzheimer’s disease crisis will continue to touch more lives and create an unsustainable fiscal toll on the nation’s healthcare system – particularly Medicare and Medicaid,” said William Thies, PhD, Chief Medical and Scientific Officer at the Alzheimer’s Association.

“This week we saw promising investigations being pursued on a variety of fronts – avenues that could very well lead to significant changes in Alzheimer diagnosis and treatment. However, the chronic underinvestment in Alzheimer research continues to be the greatest obstacle to bringing new, more effective therapies to people,” Thies said.

“Every day, researchers go to work with the sole purpose of advancing our understanding and knowledge about Alzheimer’s, which is the defining disease of the baby boomer generation. We need a government response that shows equal commitment by providing the level of funding for research that will get us better diagnostic tests, treatments, and a cure,” Thies added.

As in previous years, there was a broad array of research and data presented at ICAD 2010, including risk factors, biomarkers and new early therapy concepts.

Alzheimer’s Association TrialMatch™ is a free, confidential service that provides comprehensive clinical trial information and an individualized trial matching service for people with Alzheimer’s disease and related dementias, friends and family members, and healthy volunteers. This service is a first in the Alzheimer field.

Easily accessible at: www.alz.org/trialmatch or by calling the Alzheimer’s helpline 24-hours-a-day – 1-800-272-3900.

Alzheimer’s Breakthrough Act (S. 1492 & H.R. 3286) is a tremendous step in the fight against Alzheimer’s. The bipartisan legislation, offered in the Senate by Sens. Barbara Mikulski (D-Md.) and Christopher Bond (R-Mo.) and by Reps. Edward Markey (D-Mass.) and Christopher Smith (R-N.J.) in the House, offers great promise for someday having a world without Alzheimer’s disease.

For the last six years, federal funding for Alzheimer research has declined in real terms. In fact, for every dollar the government spends on the costs of Alzheimer care, it invests less than a penny in research to find a cure. This is all while the loss of lives and costs to Medicare and Medicaid continue to soar.

By calling for a significant increase of funding for Alzheimer’s at the National Institutes of Health (NIH) to $2 billion, this legislation authorizes the necessary resources to restore momentum in the pursuit of better diagnosis, prevention and treatment.
Researchers You Should Know
by Gail Thomas, Director, Community Relations & Advocacy

Douglas W. Scharre, MD, CMD

Douglas W. Scharre, MD, CMD, is the Director, Division of Cognitive Neurology and Associate Professor of Clinical Neurology and Psychiatry, Department of Neurology at The Ohio State University. He is an active participant in the American Academy of Neurology (AAN) and the American Medical Directors Association (AMDA) Foundation and Long-Term Care Research Network. He is the Medical Director of an all dementia long-term care facility. He was selected by his peers as one of the Best Doctors in America for the years 2005-2006, 2007-2008, and 2009-2010.

His research focuses on early detection of Mild Cognitive Impairment (MCI) and dementia, using cognitive evaluation and functional neuroimaging. He also performs outcomes studies of behavioral pharmacotherapy in Alzheimer’s disease and dementia patients. He has participated in more than 100 multi-center clinical trials in dementia including those sponsored by industry and the National Institute of Health (NIH). He has published on dementia, Alzheimer’s disease, Parkinson’s disease, dementia with Lewy bodies, frontotemporal dementia, neuroimaging in dementia, and neuropsychiatric aspects of neurological disease.

How does your research tie in with others?

“Early and accurate diagnosis offers the best chance of treating Alzheimer’s symptoms and helps to give patients and their families more time to evaluate and discuss their treatment and care options. If we can identify proteins in cerebrospinal fluid and/or with brain imaging tests…then we’re closer to finding a cure. For this reason, doctors are working on ways to improve early detection.

What’s next on your professional radar?

“Here at OSU, we have designed the Self-Administered Gerocognitive Test (SAGE), which is a very straightforward test that is amazingly simple to administer. Freely available, the test can be used by any doctor anywhere to identify potential dementia in people at an earlier stage. SAGE is extremely cost effective and is gaining traction and attention.”

Jeff Kuret, Ph.D.

Dr. Jeff Kuret is a Professor of Molecular and Cellular Biochemistry at The Ohio State University. He currently serves on the Synapse Cytoskeleton and Trafficking (SYN) and Drug Discovery (MNPS-C) review panels at the NIH Center for Scientific Review and on the editorial boards of Journal of Biological Chemistry, Current Alzheimer Research, and International Journal of Alzheimer’s Disease. He also serves on the Scientific Advisory Board of the Alzheimer’s Disease Drug Discovery Foundation and the Initial Review Board of the Medical and Scientific Advisory Council of the Alzheimer’s Association.

Dr. Kuret’s laboratory focuses primarily on tau aggregation and neurofibrillary lesion formation in Alzheimer’s disease and frontotemporal lobar degeneration, and is funded by the National Institute on Aging and the Alzheimer’s Drug Discovery Foundation.

How does your research tie in with others?

“We are developing small-molecule imaging agents for selective detection of these lesions, pulling the gold standard of postmortem diagnosis forward so that disease can be diagnosed and staged in living people. The approach offers the prospect continued to page 6
Dr. Michelle Bourgeois is a Professor in the Department of Speech & Hearing Science, The Ohio State University. She has received numerous grants from the National Institutes of Aging (NIA) and the Alzheimer’s Association to investigate interventions for spousal and nursing home caregivers designed to improve the quality and quantity of communicative interactions with residents with dementia, to evaluate memory aids and interventions for persons with dementia and traumatic brain injury, and to develop training programs for institutional caregivers. A clinical researcher, Dr. Bourgeois has published numerous research articles, training manuals and CDs, and books. She was the recipient of the 2007 Barry Reisberg Award for Non-Pharmacologic Research, Theory, and Clinical Practice.

“Since 1988 when the Alzheimer’s Association funded my very first grant, I have been pleased to be part of the effort to address the challenges of living with Alzheimer’s disease. In addition to my research, I am committed to teaching and inspiring the next generation of students, caregivers and professionals to provide the best quality care possible and to enhancing the lives of the person with dementia and their caregivers. I am pleased to share my insights through presentations and conversations with caregivers in the community, at support groups, and in a variety of residential settings.”

Michelle Bourgeois, Ph.D., CCC-SLP

How does your research tie in with others?

My research and clinical experiences complement those of Dr. Scharre, with whom I am collaborating on several projects and grants. His research team and my student clinicians are working together to offer memory screenings at community health fairs in Columbus and surrounding counties.

What’s next on your professional radar?

I am completing the data collection for my Alzheimer Association funded grant, Determining Quality of Life in Dementia with Visual and Written Stimuli, and will be analyzing and presenting the results at professional conferences. Next I hope to be working other grants that will allow me and my colleagues to make additional contributions to improving the lives of persons with dementia and their caregivers.
Medical & Professional Advisory Committee (MPAC)
by Mari Dannhauer, MSW, LSW

With the expanding role research plays in the fight against Alzheimer's, the Alzheimer's Association, Central Ohio Chapter has re-established its Medical & Professional Advisory Committee (MPAC).

The primary goal of MPAC is to:
- Develop and lead peer to peer education on the subject of Alzheimer's disease to urge physicians to encourage and engage their patients in discussing their presenting symptoms concerning memory loss.
- Advise the chapter's education coordinator on new and exciting research topics and help the chapter recruit health and research professionals to lecture and participate in the chapter's educational seminars.
- Assist and encourage college students to become aware of careers in geriatrics and ways to help those living with Alzheimer's disease and related dementias.
- Write and submit timely articles on Alzheimer's research including the chapter's newsletter.

The Medical and Professional Advisory Committee membership represents the range of expertise needed and includes professionals and stakeholders from the medical, health or science fields who have a specific area of interest in Alzheimer's disease and other dementias as well as caregiving. The committee is staffed by a member of the Central Ohio Chapter's board Dr. John Burkhart, Chapter Program Director Mari Dannhauer, and Chapter Clinical Team member and registered nurse Anne Bare.

Alzheimer's Association, Central Ohio Chapter Medical & Professional Advisory Committee Members:

**Physicians**
- Marian Schuda, MD, Gerlach Center for Senior Health
- Jeffrey Milks, MD, Riverside Family Practice Center

**Neurologists**
- Donald Freidenberg, D.O., Neurology and Neurobehavior
- Douglas Scharre, M.D., OSU Medical Center, Dept. of Neurology

**Nursing**
- Nancy Rowe, PhD, RN, CNS, Mount Carmel College of Nursing

**Speech & Hearing**
- Michelle Bourgeois, PhD, Professor, OSU College of Social and Behavioral Sciences

**Social Workers**
- Virginia Richardson, PhD Professor, OSU College of Social Work
- Holly Dabelko-Schoeny, PhD, Assistant Professor, OSU College of Social Work

**Eldercare Advisor**
- Michelle Aweshah, CSA, Elder Care Advisor, A Place for Mom

In His Own Words...
Tim Bainbridge

... alleviate or delay the degenerative process.

With numerous experimental studies being conducted throughout the country, selecting which one to participate in was of monumental importance. Coupling our own investigation with the assistance of Dr. Scharre, neurologist at OSU, and his very capable staff, we were drawn to a study involving an antibiotic, Bapineuzumab, which would be given to Deidre intravenously every twelve weeks.

The actual study is incredibly time consuming, for beyond the actual treatments, researchers must accumulate a tremendous amount of data by questioning Deidre and me. The types of questions addressed to me are not nearly as involved or lengthy as the ones Deidre must answer.

We are hopeful that this drug may delay Deidre's degenerative process. We know that it may not change some of the cells that are already “tangled,” but we are optimistic that it will at least delay or possibly prevent further “tangles” from occurring.

Regardless of the results of our particular study, we continue to feel good about our decision to participate in a research effort. We fully believe that with the multitude of experimental studies being conducted by pharmaceutical companies and research hospitals worldwide, that somewhere in some test tube there is a cure for this terrible disease.
Caring for Alzheimer’s

No two people experience Alzheimer’s disease in the same way. As a result, there’s no one approach to caregiving. Your responsibilities can range from making financial decisions, managing changes in behavior, to helping a loved one get dressed in the morning.

Handling these duties is hard work. But by learning caregiving skills, you can make sure that your loved one feels supported and is living a full life. You can also ensure that you are taking steps to preserve your own well-being.

Daily Care. As Alzheimer’s disease progresses, the abilities of a person with dementia will change. As a caregiver, you can adapt a daily routine to support these changes with some creativity, flexibility and problem solving.

Behaviors. Alzheimer’s disease and related dementias can cause a person to act in different and unpredictable ways. Some individuals with Alzheimer’s become anxious or aggressive. Others repeat certain questions and gestures. Many misinterpret what they see or hear.

These types of reactions can lead to misunderstanding, frustration and tension, particularly between the person with dementia and the caregiver. It is important to understand that the person is not acting that way on purpose.

Coping. Caring for someone who has Alzheimer’s disease can be overwhelming, exhausting and stressful. A family caregiver may feel loss over changes in relationships with a loved one with Alzheimer’s, other family members and friends. During this time, it is critical that caregivers look after their own physical and mental health.

Caring for Alzheimer’s can be stressful. Get the help you need.

Are you a caregiver for someone with a disabling condition such as Alzheimer’s? Do you feel overwhelmed? You may be putting your own health at risk. Get the resources that can help by calling 24/7 Helpline: 1-800-272-3900

Are you AWARE...
there’s a new way to fight Alzheimer’s?

“Timing is perfect. We can turn the tide in the fight against Alzheimer’s. That’s why I’m inviting women throughout central Ohio to join me and be part of the AWARE team. AWARE has such potential: I can’t wait to see where we are a year from now - I know we are really going to make a difference.”

For more information please call, Pam Liebert at 614-488-8145 or email pliebert@columbus.rr.com.
Rockin the Night Away

After more than 20 years of Gala history, the Alzheimer’s Association is putting on blue suede shoes and celebrates the 1950’s era of rock and roll. Join us on October 15, 2010 as the Gala returns as a sock-hopping celebration of the Alzheimer’s Association Central Ohio Chapter. We will “rock the night away” and acknowledge a year of successes, and continue to raise awareness and funds so the vital work of the Alzheimer’s Association can continue.

Angela An, of WBNS 10TV, will emcee the event which will include an appearance by Elvis as well as silent and live auctions. The auctions will include opportunities to bid on destination accommodations and hop across the country to such locations as New York City, Cape Cod, and Deer Valley, Utah.

The 2010 Gala will be the fifth consecutive year the event has featured Dancing with the Stars styled entertainment as Dr. Phil Paul, Jacob Neal, Jessica Germain, Kim Germain, Maureen Andrews, Claudia Walter, Kathy Ransier, Candy Tesner, Bob Behal and others will team up with the professionals at DancePlus Ballroom to lead the rocking and the rolling in what is to be a night of fifties, food and fun.

Each year, the Gala represents an important cause for the Alzheimer’s Association as well as to the community the organization supports. As the population of Alzheimer’s patients and their caregivers dramatically increases loved ones continue to feel the devastating effects of the disease. Our Gala is a fun-filled evening in support of the Alzheimer’s Association Central Ohio Chapter’s mission.

For more information, tickets and sponsorship information contact Suzy Rudolph at 614-457-6003 or srudolph@alz.org. Visit our website at www.alz.org/centralohio.
Local Resources & Referrals
We maintain updated information on home care, adult day care, care coordination, assisted living, skilled nursing facilities, eldercare lawyers and transportation available in the community. Our staff and trained professionals can help assess whether a specific care provider meets the needs of an individual with Alzheimer’s.

Help is available 24/7 at 1-800-272-3900.

Support Groups
We offer a variety of support groups for all individuals affected by Alzheimer’s disease. Groups are facilitated by professionals and/or trained volunteers. Specialized groups include early-onset for caregivers and the person with dementia, Frontotemporal dementia, adult children, and men’s breakfast.

For the most current support group offerings contact Colleen at 614-457-6003 or cmonjot@alz.org.

Dehydration: A Risk for Older Persons
In the summer months, dehydration may occur in older adults. Due to several factors, elderly persons are particularly susceptible to dehydration, including those with dementia. To avoid dehydration, there are several ways to encourage proper hydration and maintain a healthy level of fluid intake.

Causes of Dehydration
- Prolonged fever or infection
- Not wanting to or not remembering to drink
- Extensive use of laxatives and diuretics
- High salt intake with inadequate fluid replacement
- Difficulty in swallowing or obtaining foods or fluids
- A deliberate restriction of fluids to prevent incontinence, especially at nighttime

Symptoms of Dehydration
- Sudden fever
- Poor skin elasticity, flush, dry skin and mucous membranes
- Complaining of thirst
- Weakness or lethargy
- Weight loss
- Decreased urinary output, constipation
- Confusion, irritability, sunken eyes

Ways to Stay Hydrated
- Encourage drinking 6-8 cups of liquid every day
- Offer liquids anytime that a person is sitting down
- Provide a spill proof cup with a straw in the car
- Serve beverages at the temperature that seems best tolerated
- Provide watermelon, cantaloupe or other fruits high in fluid
- Provide soup, jello, popsicles or other high-liquid foods
- Avoid caffeine
Caring For You

EDUCATION PROGRAMS

Fayette County

November 2: Hope for the Holidays
Time: 5:30 p.m. – 6:30 p.m.
Location: Commission on Aging, 1179 S. Elm St.,
Washington Courthouse
Cost: Free
Reservations Required. Call: 614-457-6003

Fairfield County

September 15: Hospitalization and Physicians Visit
November 17: Improving Communication with your
Loved One
Time: 6:30 p.m. -- 7:30 p.m.
Location: Inn at Fairfield Village, 1834 Country Side Dr.,
Lancaster
Cost: Free
Reservations Required. Call: 614-457-6003

September 27: Medical Issues that affect Dementia
November 22: Hospitalization and Physician Visits
Time: 2:00 p.m. – 3:00 p.m.
Location: Berger Hospital, 600 N. Pickaway St.,
Pickerington
Cost: Free
Reservations Required. Call: 740-420-8842

Union County

September 9: Types of Dementia
October 14: Community Resources
November 11: Transitioning into Long-Term Care
Time: 4:00 p.m. – 5:00 p.m.
Location: The Gables at Green Pastures, 390 Gables Dr.,
Marysville
Cost: Free
Reservations Required. Call: 614-457-6003

2010 CHAPTER LECTURE SERIES

Wednesday, September 1: “Benefits of Adult Day Care” by Michele
Stokes, MS, PhD.
Wednesday, October 1: “Pain Management for the person with
Memory Loss” by Anne Bare, RN, BS
Wednesday, November 5: “Managing Stress using Yoga” by Pat
Henderson, LISW, RYT
Location: Worthington United Methodist Church,
600 North High St., Worthington
Time: Lunch at 11:30, Program at 11:45
Cost: $5.00 for Lunch, Lecture and Respite
Reservations Required. Call: 614-457-6003. For additional informa-
tion visit www.alz.org/centralohio

CAREGIVING 101 & 201

Franklin County

CAREGIVING 101*

October 7, 14, 21 & 28
Time: 6:30 to 8:30
Location: Emeritus at Pinnacle, 1305 Lamplighter Dr.,
Grove City
Cost: $35 for first family member – additional family
member $5 each (includes optional session on
legal and financial planning)
Reservations Required. Call: 614-457-6003

LEGAL AND FINANCIAL PLANNING

November 4
Time: 6:30 p.m. – 8:30p.m.
Location: Emeritus at Pinnacle, 1305 Lamplighter Dr.,
Grove City
Cost: $5.00
Reservations Required. Call: 614-457-6003

CAREGIVING 201*

October 27, November 3, 10 & 17
Time: 6:30 p.m. – 8:30 p.m.
Location: Chapter Office, 3380 Tremont Road, Columbus
Cost: Free
Reservations Required.

Licking County

CAREGIVING 201*

October 8
Time: 9:00 a.m. – 3:00 p.m.
Location: Zerger Hall Senior Center, 745 E. Main St., Newark
Cost: Free
Reservations Required. Call: 614-457-6003 or 1-800-272-3900

Union County

CAREGIVING 101*

August 24, 31 and September 7
Time: 6:00 p.m. – 7:30 p.m.
Location: Carriage Court of Marysville, 717 S. Walnut St.,
Marysville, OH 43040
Cost: Free
Reservations Required. Call: 614-457-6003 or 1-800-272-3900
