

cognitive decline in kansas

DATA FROM THE 2019 BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

In Kansas, **11.4%** — 1 in 9 — of those aged 45 and over report they are experiencing confusion or memory loss that is happening more often or is getting worse (“subjective cognitive decline”).

More than half of them have not talked to a health care professional about it.

For those with worsening memory problems, **43%** say it has created “functional difficulties” — that is, caused them to give up day-to-day activities and/or interfered with work or social activities.

Percent with memory problems who have not talked to a health care provider

Percent of Those Aged 45+ with Subjective Cognitive Decline

All	Gender		Age					Educational Attainment			
	Men	Women	45-59	60-64	65-74	75-79	80+	< High	High	Some	College
11.4%	10.8%	12.0%	9.4%	12.5%	11.2%	16.3%	15.0%	18.7%	12.6%	12.6%	7.3%

Percent with memory problems who say it created difficulties and burden

Percent with memory problems who have at least one specified chronic condition*

*Defined as arthritis, asthma, COPD, cancer, cardiovascular disease, and diabetes

Percent with memory problems who have depression
