The Alzheimer's Association is pleased to present North Central Texas' largest education event focused on caring for people with Alzheimer’s disease and related dementias. Serving a diverse and interconnected community of care providers, the all-day symposium features expert speakers, informative and engaging presentations, and an exhibit hall housing dozens of businesses that serve caregivers.

Healthcare professionals and family caregivers will learn about dementia from experts in a variety of disciplines. Twelve different breakout sessions provide current, practical information for people in different stages of the disease, from the recently diagnosed to end-of-life. The symposium also offers continuing education for clinical and support personnel who would benefit from learning more about dementia. For the comfort and convenience of attendees, registration includes complimentary beverages and lunch.
